
Less manual work. More time to grow.

We are a boutique AI consultancy specializing in automation, technology implementation, and applied AI solutions.

Where everyday work slows the business

01 Manual work

Teams type the same information into more than one system, every day.

03 Slow decisions

Managers build the report before they can make the decision.

02 Disconnected systems

Data sits in separate software, in email inboxes, and with individual staff.

04 AI with no clear purpose

Trials stop because nobody owns them and the business benefit is unclear.

How we work: three stages, one team

01 • DISCOVER

First, we listen.

We visit your business and watch how the work is done. We speak to your staff. Then we write a clear report with the costs and the benefits.

You receive a written plan, in order of priority.

02 • BUILD

Second, we build.

We start with one task. We connect the new system to the software you already use. It runs next to the old process until both give the same result.

A working system, tested with your team.

03 • EMBED

Third, we stay with you.

We train your staff, write simple instructions, and measure the results against the numbers we agreed at the start.

A confident team. You own the system.

The people you meet in the first meeting are the same people who build your system.

The first step is a Discovery Audit

We spend two to three weeks inside your business. We watch how each task is done and speak to the people who do it. Then we tell you where AI and automation will help, and where they will not.

2-3 weeks

Fixed scope, fixed fee

No obligation to continue

-
- 01 We watch the daily work, including the steps between teams
 - 02 We draw how information moves between people and systems
 - 03 We measure how long each task takes today, and what it costs
 - 04 We check what your data allows, and how much work each change needs
-

What you receive from the audit

01 A picture of today

A diagram of each workflow, showing the delays, the repeated steps and where mistakes happen.

03 A business case you can use

Time saved, cost, risk and what is needed for each change, written in numbers you can check.

02 The opportunities worth doing

A short list of changes, ranked by the benefit and by how much work each one needs.

04 Your next steps, in order

A plan in order of priority. You can use it with us, with your own team, or with another firm.

Work we have already delivered

Real systems working in real businesses today. We keep client names private. These numbers come from those projects; your own results will depend on your processes.

EXPORT OPERATIONS 7 hrs Saved on every export. Packing lists are made from ERP data, not by hand.	SYSTEMS INTEGRATION 5 hrs Saved on each sales entry run. Online sales reach the ERP every morning.	PAYROLL 5 hrs Of payroll file work each cycle. The bank file is now ready in seconds.
FINANCE 2 hrs Saved on every payment. Over 60 invoice lines matched automatically.	STOCK PLANNING 15% Fewer items out of stock. Forecasts ready in minutes, not 12–15 hours.	SALES OPERATIONS 50 min Of email sorting each day. Order details are read from PDF files.

Packing lists made in one step

BEFORE

Made by hand, one invoice at a time

Accountants made every packing list in Excel by hand. They copied invoice numbers, item lines, countries of origin and box numbers. Every export meant doing this again.

AFTER MARTERS & CO.

Choose the invoices. The list is ready.

We built an app that reads the invoice data from the ERP. The team chooses the invoices for an export, and the app makes the packing list.

- 01 · Choose invoices in the ERP
- 02 · The app reads the details
- 03 · The packing list is made

7h

of manual work removed
from every export.

What we build after the audit

We build around your staff and the software you already pay for. Every new system runs next to the old one before you switch.

Automation build and rollout 4–8 weeks

The new system runs next to your manual process for one full cycle. We stop the manual work only when both give the same result.

Custom application build 8–20 weeks

Software made for your business. You receive the app, the source code, the documents and the accounts it runs on.

Systems integration 3–6 weeks

We connect your accounting, sales, stock and HR software, so the same data is not typed twice. If something fails, a real person is told.

AI agents and assistants Scoped per workflow

Help with documents, company knowledge and routine decisions. Your staff still check the result where judgement is needed.

We stay available after the handover

Team enablement

We train your team on the real system, not on slides. We write simple instructions in your own words, so the knowledge stays in the company.

Leadership briefing

A half-day session for owners and managers: where automation pays, where it does not, and how to judge any offer you receive, including ours.

AI workflow programme

Each month we review the results against the original numbers and make small improvements. You speak to the same person every time.

Managed operations

We watch the systems we built, fix problems quickly, and keep them working when the software or the AI models change.

You own the software, the accounts and the documents

Everything we build runs on accounts in your own name. If you stop working with us, nothing stops working.

Data access

Before we start, we agree in writing what we can see and how we handle it.

Human review

We agree the points where your staff approve a result or handle an exception.

Reliability

We test against agreed rules, watch the system after launch, and can return to the old process.

Ownership

We write the documents and train one person in your team to own the system.

How we charge

01 · DISCOVERY AUDIT

A fixed fee.

We agree the scope and the price before we start. The plan is useful even if you do not build it with us.

02 · IMPLEMENTATION

Quoted per workflow.

One price for each workflow, based on what we saw in the audit. The work, the cost and the expected result are written down.

03 · ONGOING CARE

A monthly arrangement.

An agreed monthly scope for support and improvements. This is optional, and you can stop it at any time.

Most businesses start with one task: the one that takes the most staff time each week.

Marters & Co. YOUR NEXT STEP

Tell us which task takes the most time

It can be a repeated task, two systems that do not share data, or an idea you want to test. You do not need a written brief. The first conversation is free.
